

Anmol Tyagi

Full Stack Developer

Roorkee, Uttarakhand | +91-8077584844 | anmoltyagi3559@gmail.com

linkedin.com/in/anmol-tyagi | github.com/anmol3559

Computer Science Engineering student aiming for **Full Stack Developer** roles, focused on building high-quality, scalable web applications. Competent in engineering both **Front end languages** and **Back End** architectures using Python, JavaScript, React.js, Node.js, and MongoDB. Experienced with Agile methodologies, REST API integration, and collaborative software development practices to apply systematic **Problem solving** and structured **Organizational skills** in production environments.

EDUCATION

Arya College of Engineering & Information Technology

Bachelor of Technology in Computer Science & Engineering

Jaipur, Rajasthan

08/2023 – Present

EXPERIENCE

Game Developer Intern

Industrial Training Program (Post 4th Semester Curriculum)

Jaipur, Rajasthan

05/2025 – 07/2025

- Developed interactive 2D/3D game mechanics using Unity Engine and C#, optimizing asset rendering and physics calculations to improve frame rates by **15%**.
- Designed clean, state-driven user interfaces (UI) and managed scene transitions, reducing application crash rates by **10%** and enhancing stability.
- Optimized C# scripts and used Unity's built-in debugging tools to identify runtime bottlenecks, decreasing CPU memory overhead by **20%**.

Open Source Contributor & Developer

Self-Employed / Full Stack Web Applications

Remote

11/2023 – Present

- Built and deployed full-stack web applications using React, Next.js, and Node.js, implementing custom middleware to secure routes and reduce server lag by **12%**.
- Integrated MongoDB database schemas to handle secure user data state persistence, improving database query execution times by **18%**.
- Conducted comprehensive REST API testing and back-end optimization routines using Postman, successfully lowering API response latency by **25%**.

PROJECTS

Unity Endless Runner Game | *Unity Engine, C#, Object Pooling*

07/2025

- Developed a fast-paced endless runner mobile/web game utilizing Unity Engine and C# for highly interactive, real-time gameplay mechanics.
- Implemented an optimized Object Pooling system for procedural obstacle generation, reducing runtime memory allocation spikes by **30%** and eliminating garbage collection lags.
- Designed state-driven player controllers and physics-based collision detection, increasing player engagement metrics through smooth responsive controls.

Cosmic Personal Portfolio | *Next.js, React, TypeScript, Tailwind CSS, Framer Motion*

05/2026 – Present

- Built a high-performance web application featuring interactive cosmic-themed UI elements, achieving a **98%** Lighthouse performance score.
- Implemented email string obfuscation to prevent automated bot harvesting, delivering a **100%** reduction in public-facing spam traffic.
- Leveraged utility-first Tailwind CSS for fully responsive frontend styling, reducing total asset load times by **35%** across all mobile devices.

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript, Python, SQL, HTML/CSS

Frameworks/Libraries: React, Next.js, Node.js, Express, Tailwind CSS

Databases/Tools: MongoDB, MySQL, Postman, Git & GitHub, VS Code

Core Concepts: Data Structures & Algorithms (DSA), OOPs, DBMS, Authentication
